

# Combining Japan's Technology and Know-how to Help Solve the World's Water Problems

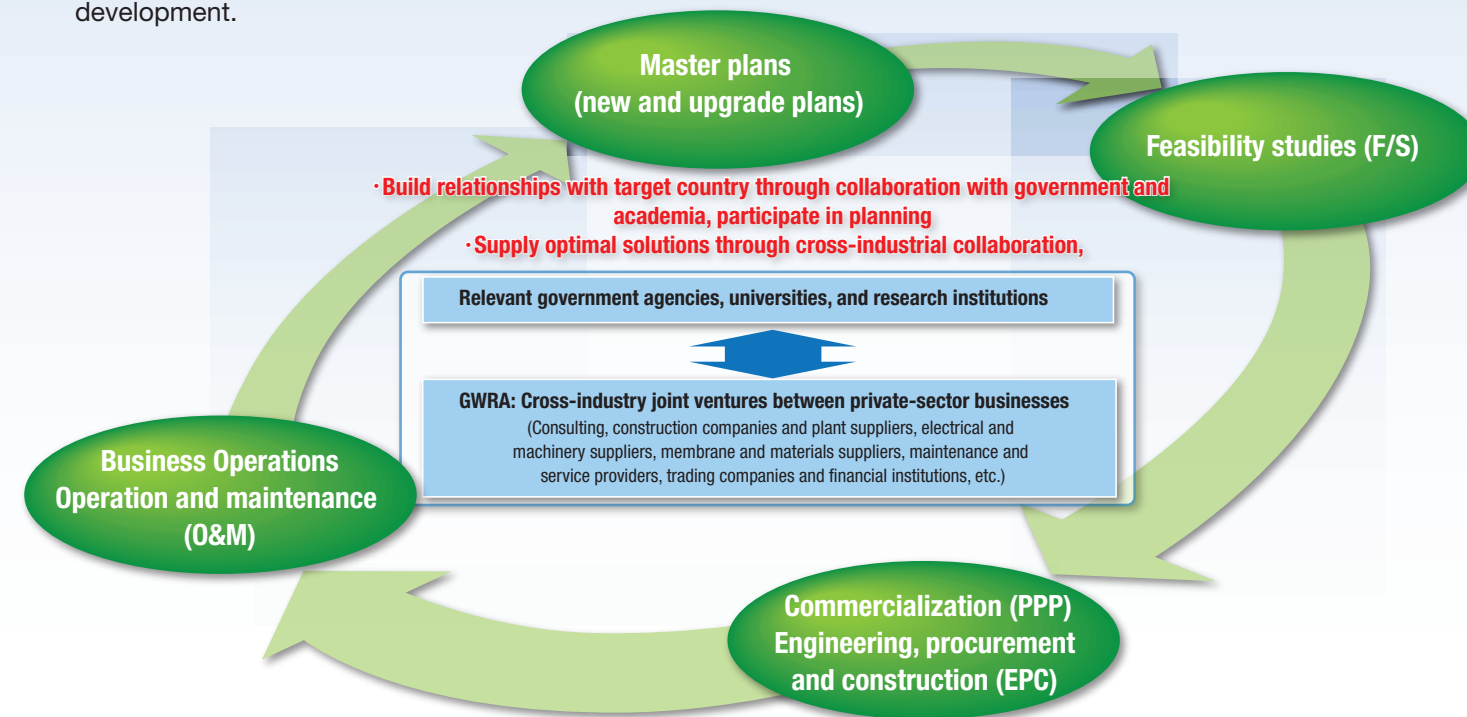

## Domain of Global Water Business

Comprehensive management of a water recycle system after water reclamation which covers securing water resources, water supply and the recycling.

## GWRA's activities

With the aim of establishing operating businesses in global markets based on water recycling and reuse systems that utilize Japan's technology and know-how, GWRA, in collaboration with government and academia, brings together companies from related sectors to offer complete packages combining policies and systems that suit the development plans of different nations and regions, as well as their particular needs and circumstances. The objective is to supply optimal solutions that take account of factors such as energy supplies and industrial development.

Proposing water businesses that extend from planning to business operations

## GWRA's collaboration

In order to promote the implementation of Japan's growth strategy, the economic growth of emerging countries and regions, and the resolution of the global water issues, the GWRA engages in investigation and information dissemination, along with the development of required technologies, feasibility studies, and project-finding activities.
